- A challenging position as a build, release engineer, and configuration management engineer allows me a better opportunity in the industry in which my skills can be utilized to the best of my potential to aid the growth of the company.

PROFESSIONAL SUMMARY

- Software Engineer with 4.9 years of IT experience, possessing substantial knowledge and expertise in Build and Release engineering.
- Proficient in Git and Bitbucket administration, repository setup, user and access management, and version control operations such as branching, tagging, and merging.
- Strong expertise in AWS services including IAM, S3, EC2, ECS, Lambda, RDS, VPC, CloudFormation, CloudFront, Route53, API Gateway, and related networking and security configurations etc. and Visual Studio, REST API, Flask.
- Skilled in designing and managing CI/CD pipelines across GitHub Actions, Bitbucket Pipelines, and Jenkins, including workflow development, webhook integration, plugin configuration, and distributed build setups. Experienced in Azure DevOps for end-to-end automation.
- Proficient in Azure services such as Access Management, API Management, Application Gateway, Blob Storage, ACR, Front Door, Key Vault, VNet Peering, Azure Functions, and WAF integration.
- Leveraging Terraform in AWS and Azure to deliver secure, scalable, and cost-efficient infrastructure as code, optimizing performance, reliability, and compliance to meet customer requirements.
- Good knowledge in containerization technologies such as Docker container deployment and scaling with Kubernetes orchestration, experience with Helm and Setting up Kubernetes Cluster Using AWS KOPS.
- Experienced in creating Docker images, containers, and Dockerfiles for multiple environments, using Docker Compose with shared networks for multi-server setups.
- Proficient in Bash Shell Scripting and automation using Python, pyspark, pandas. Experienced in installing and managing operating systems with strong knowledge of Linux Server Ubuntu, and Powershell, rooted in strong computer science fundamentals.
- Skilled in monitoring AWS and Azure using CloudWatch and Log Monitor, with Prometheus and Grafana for Kubernetes performance metrics and alerts.
- Configuring build & release pipelines in Github to deploy the packages in dev, qa, preprod, and prod environments. Excellent debugging and troubleshooting problems and applications to ensure high availability in distributed systems,. Ensuring quality of product, security and compliance requirements,
- Experienced in AWS and Azure, delivering infrastructure and deployments tailored to customer requirements, platform-specific credits, and preferred tools, spring boot.
- Hands-on experience with networking, including VPN configuration and management. Working knowledge of relational databases RDS, Postgres SQL, MongoDB, mysql and SQL, along with an understanding of database architecture.
- Technical expert on continuous integration and continuous delivery practices, with a focus on CI/CD pipelines for continuous improvement.
- Collaborative team spirit and communication within teams. Experienced in project management and Scrum, agile approaches, maintain culture of collaboration, understanding of software development methodologies.
- Worked on Java Backend, ETL and Frontend Developments like React js and Node JS, manage Kafka, Knowledgeable in microservices architecture, IaaS and understanding business processes, Testing. Strong problem-solving and decision making skills, ensuring efficient cloud infrastructure and containerization management, disaster recovery and cloud migration.
- Collaborate with domain experts, Committed to continuous learning strategy and improvement within the field of information technology like AI/ML and active participation in defining technical roadmaps, Stay current with industry trends, passionate about building scalable and robust tools.
- Experience working with PySpark and Databricks for large-scale data processing, implementing machine learning workflows and end-to-end data solutions. Hands-on exposure to test ML model development using TensorFlow, PyTorch, Scikit-learn, R, and SPSS.
- Strong analytical mindset with a focus on innovation, experimenting with new technologies, and implementing efficient DevOps practices. Skilled in handling data pipelines, consulting with stakeholders, fostering collaboration, and applying industry best practices to deliver scalable and optimized solutions.

SKILLS

Agile AWS Azure

GitHub Actions

MLflow

bit bucket Jenkins

Azure DevOps

Docker Kubernetes

GIT PowerShell

Linux Prometheus

Grafana Python

Terraform Ansible

Shell Scripting IaaS

PaaS SaaS

Hashicorp Vault

WORK EXPERIENCE

Cloud Engineer

Prolax IT Solutions Pvt Ltd

06 2021 – 08 2024

Hyderabad, IN

Cloud & DevOps Engineer

Hubino Technologies Pvt Ltd

09 2024 – Till Date

Chennai, IN

LEARNING

MLOPS GCP

Machine Learning

STRENGTHS

Hard-working Problem-solver

Rapidly adaptable

Inquisitively Explorative

PROJECTS

Digital Signage System

- Developed a multi-tenant digital signage platform with frontend (S3/CloudFront), backend (EC2 dev, ECS prod) using SQS for real-time content delivery, WebSocket microservice for synchronized displays
- Reduced infrastructure costs by ₹51 by optimizing multi-environment setups.
- Automated CI/CD pipelines via GitHub Actions and provisioned AWS resources with cloudFormation, optimizing cost and scalability.

Environment: AWS resources S3, CloudFront, EC2, IAM, SG, ECS, ECR, ALB, RDS, VPC React, Spring Boot, GitHub Actions, SQS.

Lumifi Dental – Serverless EHR Platform

- Automated AWS serverless deployment using Lambda, API Gateway, S3, and RDS with Terraform and GitHub Actions, enforcing secure CI/CD pipelines.
- Optimized AWS infrastructure costs by consolidating VPCs, right-sizing RDS instances, and enforcing least-privilege access, reducing monthly expenditure by ₹57 while improving performance and maintainability.
- Supported backend with SES integration, IAM, Secrets Manager, and SSL/TLS, ensuring secure and compliant operations.
- Reduced deployment overhead by 40% through Infrastructure-as-Code and automated environment provisioning.

Environment: AWS resources S3, CloudFront, EC2, Lambda, IAM, SG, RDS, VPC, GitHub Actions, SES, API Gateway.

Thinkrd365 – HR & Payroll System

- Architected a secure and maintainable Azure-based HR and payroll system with VMs, PostgreSQL Flexible Server, Blob Storage, Front Door, API Management, and Application Gateway, implementing Terraform IaC, Azure AD authentication, Key Vault, and centralized log monitoring.
- Executed a full *Azure resource migration and project rename* from Platform 2.0 to Thinkrd365, preserving Git commit history across dev/uat branches and minimizing operational risk using Terraform.
- Designed and implemented a *custom JWT issuance flow* on top of Azure AD B2C, issuing lightweight, business-specific tokens for internal microservices, improving security and system performance.
- Centralized *Kafka and Zookeeper deployment* on a dedicated VM using Docker Compose with cross-VM networking, automated systemd restarts, and Azure Log Analytics monitoring, ensuring reliable messaging and operational observability.

Environment: Azure, Terraform, React, Node.js, Python, Spring Boot, Azure DevOps.

EDUCATION

- 70.67 % in M.Tech. (2014–2017) at JNTUCEA, Anantapur.
- 76.11 % in B.Tech. (2008–2012) at Siddartha Institute Of Science & Technology.
